

Appendix I. Roof Beam and Girder Design

RB1 and RB2 Design:

$$l_{RB1} := 35 \text{ ft}$$

**From
Appendix C.**

$$w_{dead} := 19.8 \text{ psf} \cdot 4 \text{ ft} + (102 \text{ psf} + 39 \text{ psf}) \cdot (4 \text{ in} + 8 \text{ in} + 8 \text{ in}) = 314.2 \text{ plf}$$

$$w_{snow} := 23.1 \text{ psf} \cdot 4 \text{ ft} = 92.4 \text{ plf}$$

$$P_u := 1.2 \cdot w_{dead} + 1.6 \cdot w_{snow} = 0.525 \text{ klf}$$

**VMΔ
Case 1**

$$M_u := \frac{(P_u \cdot l_{RB1}^2)}{8} = 80.372 \text{ ft} \cdot \text{kip}$$

$$L_{brace} := 0 \text{ ft}$$

$$\therefore Z_X$$

Try W12x19:

$$\phi M_p := 92.6 \text{ kip} \cdot \text{ft} \quad I_x := 130 \text{ in}^4 \quad \phi V_x := 86 \text{ kip}$$

Check Self Weight:

$$M_u := M_u + \frac{(0.019 \text{ klf} \cdot l_{RB1}^2)}{8} = 83.282 \text{ (kip} \cdot \text{ft)} < \phi M_p = 92.6 \text{ ft} \cdot \text{kip}$$

OK

Check Shear:

VMΔ

$$V_u := \frac{1}{2} \cdot ((P_u + 0.019 \text{ klf}) \cdot 35 \text{ ft}) = 9.518 \text{ kip} < \phi V_x = 86 \text{ kip}$$

OK

Check Deflection:

VMΔ

$$\Delta_{ALL} := \frac{l_{RB1}}{240} = 1.75 \text{ in}$$

$$\Delta_{ACT} := \frac{(5 \cdot w_{snow} \cdot l_{RB1}^4)}{384 \cdot E \cdot I_x} = 0.828 \text{ in} < \Delta_{ALL} = 1.75 \text{ in}$$

OK

∴ Use W12x19, A992 steel for RB1/RB2

RG1 and RG2 Design:

$$w_{RJ1} = 0.495 \text{ klf} \quad l_{RG1} := 32 \text{ ft}$$

$$Point_{RJ1} := w_{RJ1} \cdot \frac{35}{2} \text{ ft} = 8.657 \text{ kip}$$

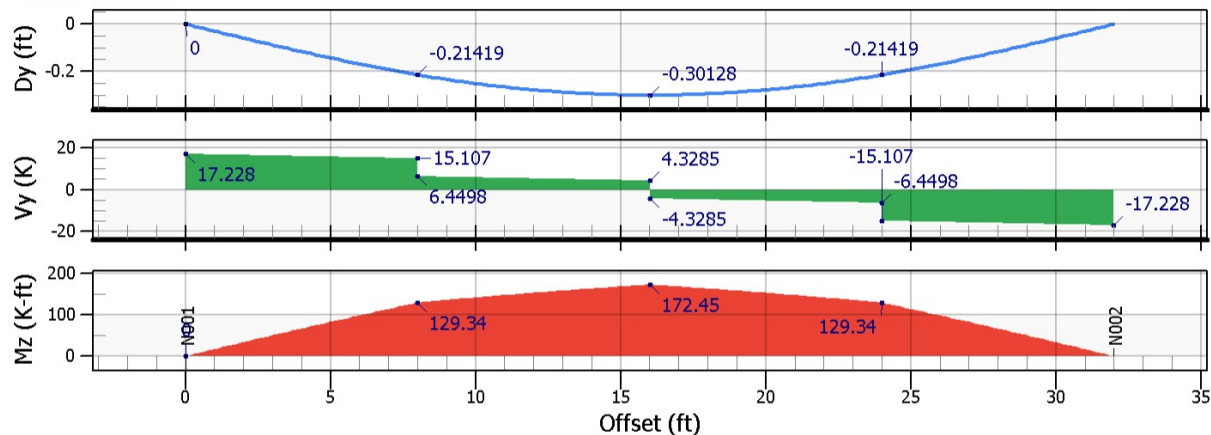

From Appendix C. 4in, 8in, and 8in are the sizes of the parapet.

$$Parapet := (141 \text{ psf}) \cdot (4 \text{ in} + 8 \text{ in} + 8 \text{ in}) = 0.235 \frac{\text{kip}}{\text{ft}}$$

The above loads were applied to a simply supported beam in VA and recorded in the table below.

Load Case: D

6/21/2019 - 12:40 PM
Jason Andrew Hock

$L_b (ft)$	8	8	8	8
$M_u (ft \cdot kip)$	129.34	172.45	172.45	129.34
C_b	1.14	1.14	1.14	1.14
$\frac{M_u}{C_b} (ft \cdot kip)$	113.46	151.27	151.27	113.46

Required strength from table:

$$V_u := 17.228 \text{ kip}$$

$$M_u := 151.27 \text{ ft} \cdot \text{kip}$$

Try W21x44: ϕM_n Z_X $C_b C_b := 1.14$

$$\phi M_n := 303 \text{ kip} \cdot \text{ft} \quad \phi M_p := 358 \text{ kip} \cdot \text{ft} \quad I_x := 843 \text{ in}^4 \quad \phi V_x := 217 \text{ kip}$$

$$C_b \phi M_n := \phi M_n \cdot C_b = 345.42 \text{ kip} \cdot \text{ft} < \phi M_p = 358 \text{ ft} \cdot \text{kip} \quad \text{OK}$$

$$\phi M_p = 358 \text{ kip} \cdot \text{ft} > M_u = 151.27 \text{ ft} \cdot \text{kip} \quad \text{OK}$$

Check Self Weight: Minimum from above calculations + self-weight

$$M_u := C_b \phi M_n + \frac{1.2 \cdot (0.044 \text{ klf} \cdot l_{RG1}^2)}{8} = 352.178 \text{ (kip} \cdot \text{ft)} < \phi M_p = 358 \text{ ft} \cdot \text{kip}$$

OK

Check Shear: $VM\Delta$

$$V_u := \frac{1}{2} \cdot (0.044 \text{ klf} \cdot l_{RG1}) + V_u = 17.932 \text{ kip} < \phi V_x = 217 \text{ kip}$$

OK

Check Deflection: From VA

$$\Delta_{ALL} := \frac{l_{RG1}}{240} = 1.6 \text{ in}$$

$$\Delta_{ACT} := 1.48 \text{ in} < \Delta_{ALL} = 1.6 \text{ in}$$

OK

∴ Use W21x44*, A992 steel for RG1/RG2

*Before W21x44 was selected, a W14x30, W14x34, and W18x40 were tested and failed the deflection test
